## HOW DOES IT WORK?

1. The rotation of a fanned disc and funnel (@3000RPM) draws polluted air into the revitaliser from the surrounding area.
2. Rotation of the solution in the bowl (a mix of water and our specially formulated concentrates\*) results in the formation of a liquid curtain of minute droplets. This liquid curtain serves as a **filter** through which air is drawn in from the surrounding area. Dust & pollen, bacteria, chemicals & odours are trapped in these tiny droplets & then float to the surface of the solution in the bowl. The Beautiful Aromas Revitaliser uses **Hydro-filtration technology** to scrub the air clean from pollen, dust, fungi, bacteria, viruses volatile chemicals & malodours.
3. Cleaner, fresher & fragrant air containing essential oil molecules is released back into the surrounding area, offering those in the vicinity **a breath of well-being**.

For best results the solution in the bowl should be discarded daily, the bowl should be rinsed & filled with a fresh solution of water and a Beautiful Aromas concentrate of your choice.

\*Beautiful Aromas concentrates are sold separately.
